Battery Powered Boost/Flyback/SEPIC application

The SCT81620 device is a wide input, non-synchronous boost controller. The Device can be used in Boost, SEPIC and Flyback converters and topologies.

The switching frequency of the SCT81620 device can be adjusted to any value between 100kHz and 2.2MHz by using a single external resistor or by synchronizing it to an external clock. Current mode control provides superior bandwidth and transient response in addition to cycle-by-cycle current limiting.
